Python for Supply Chain

Session 7 · Mon 7 Dec 2026

New tools, your own question

Today's question

What question will you answer in your project?

SQL and pandas answer the same question

SQL

```
SELECT country,
  SUM(revenue) AS total
FROM sales
GROUP BY country
ORDER BY total DESC
LIMIT 5
```

pandas

```
totals = sales_clean.groupby(
    "country")["revenue"].sum()
totals = totals.sort_values(
    ascending=False)
totals.head(5)
```

Four SQL words cover most questions

SQL	pandas idea
SELECT … FROM	choose columns
WHERE	filter rows
GROUP BY	groupby
ORDER BY … LIMIT	sort, keep the top

Power BI in three clicks

1

Get data

Open product_value.csv

2

Bar chart

Product and revenue

3

Card

Total revenue

A good question has three parts

Specific

One thing, not 'what drives sales?'

Answerable

Products, countries, dates. No profit data.

Useful

A manager can decide something.

Pick one project, or write your own

#	Question
1	Is class A revenue steady by month?
2	Which country outside the UK buys most?
3	Which products get cancelled most?
4	A reorder point, with your assumptions

Now in Colab

Notebook	s7_new_tools.ipynb
In class	SQL, then your project plan
At home	Power BI chart

Homework and daily recall

Homework

1. Build the Power BI chart at home
2. Finish your project plan
3. Start the first analysis

Daily recall

1. Three questions Tuesday
2. Three questions Wednesday
