PYTHON FOR SUPPLY CHAIN

Session 8 · Thu 10 Dec 2026

Detective work

your question, your analysis, checked numbers

© 2026 Santasila Bryan Kusno. All rights reserved.

Today

1

Case hunt

2 minutes

2

Project work

hints only

3

What I found

3 sentences

© 2026 Santasila Bryan Kusno. All rights reserved.

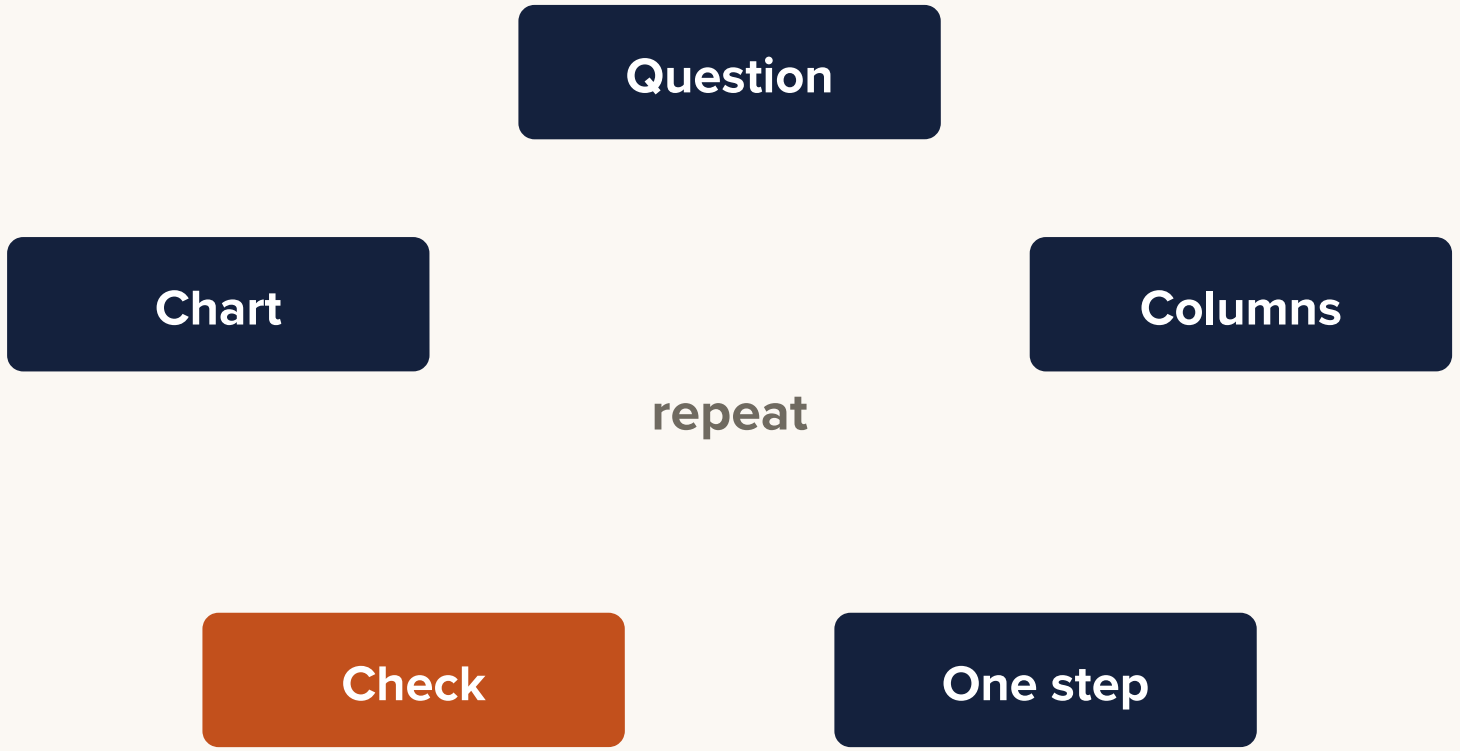

Case hunt: two minutes

No right or wrong answer.

© 2026 Santasila Bryan Kusno. All rights reserved.

The analyst's loop

© 2026 Santasila Bryan Kusno. All rights reserved.

Print the shape after every filter

```
netherlands_sales = sales_clean[sales_clean["country"] == "Netherlands"]
print(netherlands_sales.shape)
```

0 rows

the filter is wrong

No change

the filter did nothing

A sensible number

keep going

© 2026 Santasila Bryan Kusno. All rights reserved.

Check one number a second way

groupby

```
...groupby("country")
```

filter + sum

```
df[mask]["revenue"].sum()
```

SQL

```
WHERE country = ...
```

58,182.55 = 58,182.55

Same number two ways: you can trust it.

Four traps to watch

1. **Filter not saved**
   assign it to a name

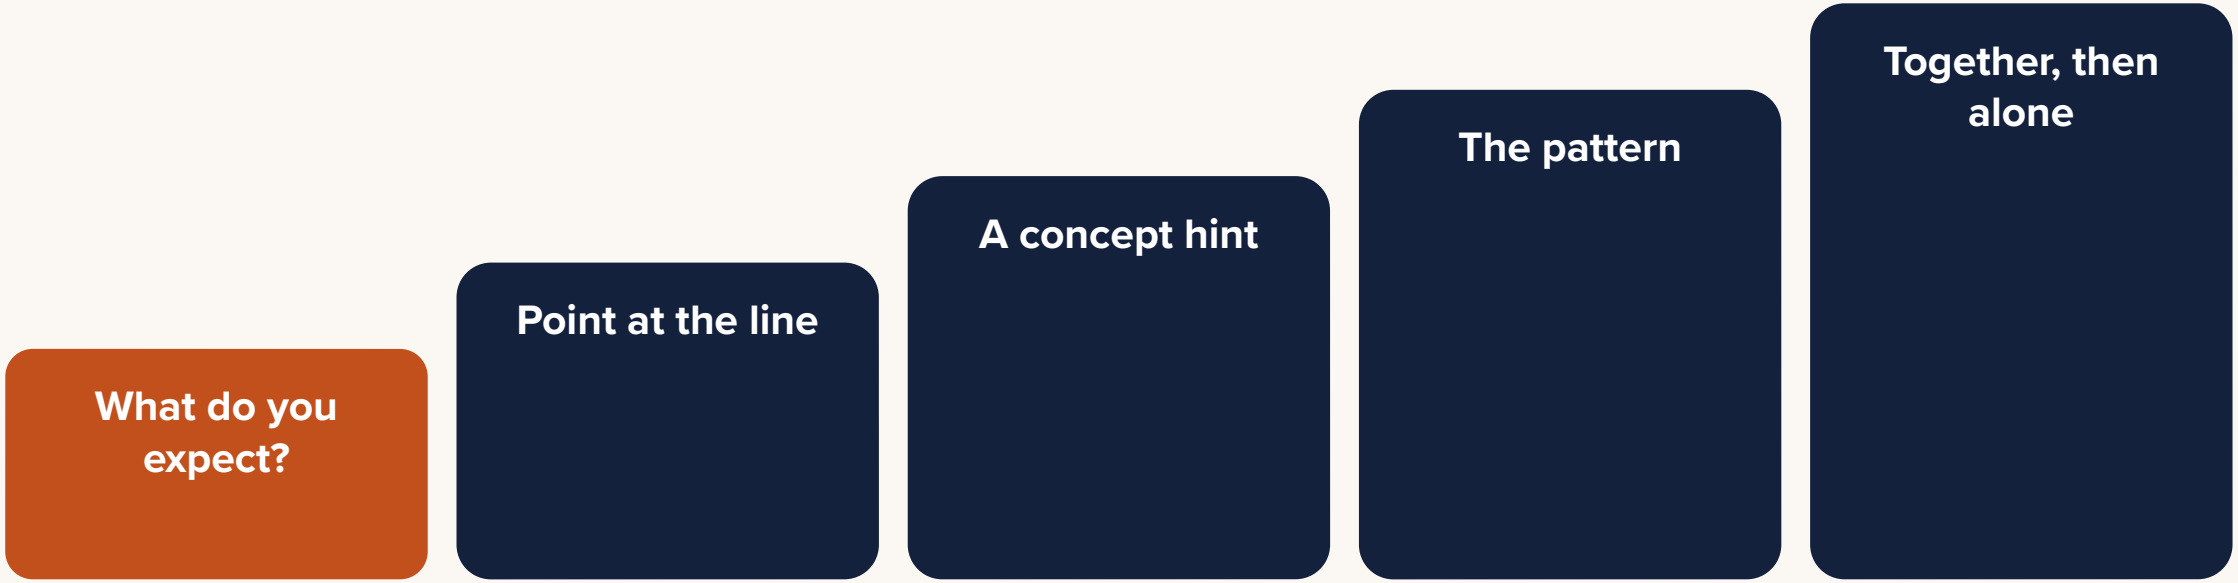

2. **Merge grows**
   count rows before and after

3. **Dates as text**
   pd.to_datetime again

4. **UK is 85%**
   say so in the title

What I found so far

1

Answer

one sentence

2

Evidence

one number

3

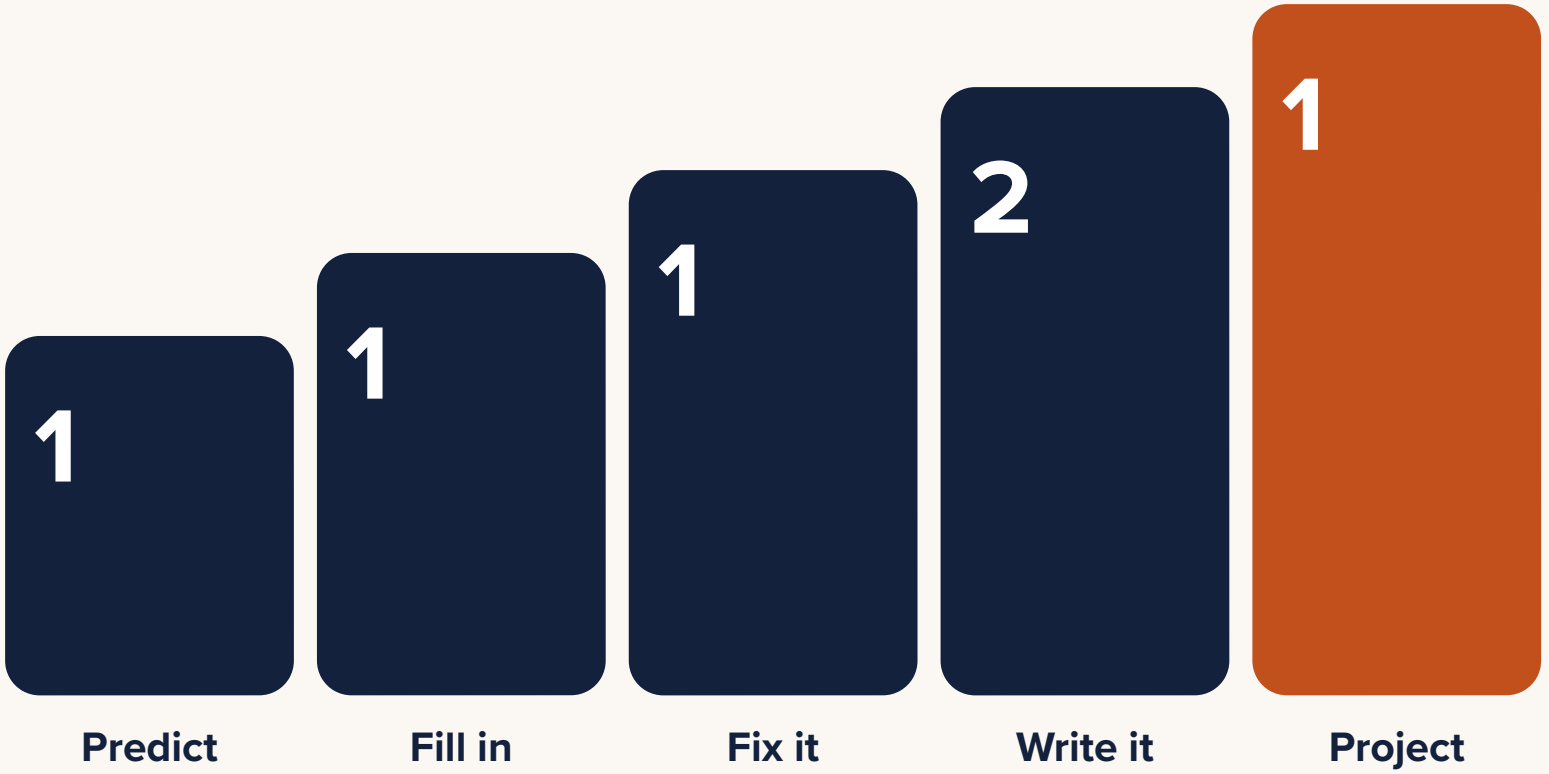

Next

one step

Answer first, not the story of the work.
