Session 8: Detective work

Question: Your own question.

Concepts

Concept	In daily life	In Excel	The limit
Plan	A packing list before you pack	A sketch of the table	A plan can change, but write it first
Check a number	Counting the boxes twice	A second formula	Check one number a second way
Draft chart	A rough drawing	A first chart	The title says the finding

Code patterns

```
print(len(my_table))   # row count after each filter

my_table["revenue"].sum()   # compare with a second way
```

Three common errors

Error	What to do
KeyError	A column name is wrong. Print the column names to check.
Empty table	Your filter removed every row. Print the row count before and after.
A chart before the numbers are checked	Check one number first.

Exercises and expected answers

Exercise	Expected
Predict: Fewer or more than 5,000 rows for the Netherlands? Guess first.	Guess first, then run it to check
Fill in: The Netherlands' revenue with a filter and a sum.	58182.55
Fix it: Keep the class A products. One sign is wrong.	(671, 4)
Write it: Check the same Netherlands number a second way, with groupby.	58182.55 again
Write it: Class A revenue for each month. Join the class onto the sales rows with merge, and count the rows before and after.	the row count stays 101458
Your question in one sentence	Your own
One number checked by hand, and how	Your own
What I found so far	Three sentences: answer, evidence, next step

Project checklist

Done?	Item
	My question is one sentence
	I know which columns I need
	I print the row count after each filter
	I checked one number a second way
	My chart title says the finding
